

Jülich, 12 January 2026

Researchers of the Forschungszentrum Jülich can also apply for resources within the framework of the GCS/NIC Call for Regular Projects and the GCS Large-Scale Call, both of which are synchronized with this VSR Call. Projects are classified as "Large-Scale" if they require at least 2% of the systems' annual production in terms of estimated availability.

For further information on GCS Large-Scale and GCS/NIC Regular Projects see

<https://www.gauss-centre.eu/for-users/hpc-access/>

Applying for extensions of expiring projects is possible. In this case, please provide the project ID of the project you want to extend. In the project description, please focus on new aspects which will be covered in the upcoming computing time period. You do not need to provide a copy of the previous project description(s).

Computing time applications must not overlap. For example, if your project has been granted computing time for the period 1 November 2025 – 31 October 2026 it is not possible to apply for additional computing time in this call.

Please note, that computing and data resources, as well as access to the JSC HPC infrastructure, are provided to the best of our ability. However, approved resources are not guaranteed. We reserve the right to limit the availability of resources if external conditions such as force majeure, obligations to save electricity, or other circumstances make this necessary. Resources lost in such cases will not be refunded.

If you have any questions regarding the application process, please do not hesitate to contact the Coordination Office for the Allocation of Computing Time

Email: coordination-office@fz-juelich.de

Phone: 02461 61-2200

With kind regards

Florian Janetzko
Head of the Office for the Allocation of Computing Time
